

Code Explanation

Code Explanation: `glue\_pyspark/src/main/\_\_init\_\_.py`

Purpose

This file initializes the Python package for an AWS Glue PySpark job that implements an SDLC (Software Development Life Cycle) Wizard data pipeline.

Step-by-Step Breakdown

1. ****Module Docstring****

```
"""AWS Glue PySpark Job - SDLC Wizard Data PipelineMain package initialization"""
```

- Documents the package's purpose: AWS Glue job for SDLC Wizard data processing- Identifies this as the main package initialization file

2. ****Version Metadata****

```
__version__ = "1.0.0"
```

- Defines the package version using semantic versioning (major.minor.patch)- Current version: 1.0.0 (initial release)

3. ****Author Metadata****

```
__author__ = "Data Engineering Team"
```

- Identifies the team responsible for maintaining this code

4. ****Description Metadata****

```
__description__ = "SDLC Wizard data pipeline with SCD Type 2 implementation"
```

- Describes the pipeline's key feature: ****SCD Type 2**** (Slowly Changing Dimension Type 2)- SCD Type 2 tracks historical changes by creating new records with effective date ranges

5. ****Public API Declaration****

```
__all__ = [ "job", ]
```

- Controls what gets exported when using `from main import \*`- Only exposes the `job` module/object as part of the public API- Prevents accidental import of internal implementation details

Summary

This is a standard Python package initialization file that:- Sets up metadata (version, author, description)- Documents the package purpose (SDLC Wizard pipeline with SCD Type 2)- Defines the public interface (exports only `job`)
