

Code Explanation

Code Explanation: `glue\_pyspark/src/test/\_\_init\_\_.py`

Purpose

This file initializes the **test package** for an AWS Glue PySpark job within the SDLC Wizard Data Pipeline project.---

Step-by-Step Breakdown

1. **Module Docstring**

```
"""AWS Glue PySpark Job - Test PackageUnit tests for SDLC Wizard Data Pipeline"""
```

- Describes the package as a test suite for AWS Glue PySpark jobs.- Indicates it contains unit tests for the SDLC Wizard Data Pipeline.---

2. **Package Metadata Variables**

```
__version__ = "1.0.0"__author__ = "Data Engineering Team"__description__ = "Test suite for SDLC Wizard data pipeline"
```

- **__version__**: Tracks the test package version (currently `1.0.0`).- **__author__**: Identifies the maintaining team.- **__description__**: Provides a brief summary of the package's purpose.---

3. **Public API Declaration**

```
__all__ = [ "test_job", ]
```

- **__all__**: Defines which modules/symbols are exported when someone does `from test import \*`.- Currently lists `test\_job`, indicating a test module named `test\_job` exists (or will exist) in this package.---

Summary

This `__init__.py` file:- Marks the `test/` directory as a Python package.- Provides metadata for version control and documentation.- Declares `test_job` as the primary test module for external imports.**No executable logic is present**—this is purely structural/organizational code.
